Professional Summary

- **Experience**: 2+ years in full-stack software development specializing in web development through projects such as school organization websites, automation scripts, and cart rental POS software
- **Responsibilities**: Collaborated with organizational executives, business owners, and industry teams to gather requirements, develop software solutions and support web development or social media initiatives
- **Web Development**: Experience in modern frameworks such as Next.js with TypeScript with integration of agentic workflows in development through the use of MCP servers, tool-calling agents, and token management strategies with coding agents such as Antigravity and Claude Code.
- **Data**: Applied experience in data analytics and engineering tasks from internship and extra-curricular projects through languages and platforms such as Google Sheets, SQL, MongoDB, and Azure Databricks

Experience

- **American International Assurance - Philippines** — Makati, Metro Manila
  Data Analyst Intern — *April 2026 - August 2026*
  - Reduced resource expenditure in ticket resolution by analyzing 2025 to 2026 internal data requests, creating automated data extract reports with SQL, and configuring Azure Databricks jobs for daily and monthly reports
  - Developed an automated data extraction and preprocessing pipeline using Python, Pandas, SQL, and Azure Databricks to curate a dataset of 6.9k+ emails with filters for PII and LLM-generated labels for downstream email intent classification
  - Supported maintaining Data Governance standing by accomplishing data exploratory requests with SQL and reporting cases of poor data quality or non-compliance with intended formats
- **Green & White** — Malate, Manila
  Web Manager — *July 2025 - Present*
  - Offloaded manual work from other officers by automating registration form generation and scraping Google Calendar data to auto-format pictorial schedules
  - Automated a dynamic Google Form for yearbook pickup scheduling that updated available slots and inventory using Google Apps Script
  - Enhanced student reach for the university's yearbook, garnering 1.6k+ website visits, by developing the organization's main website in collaboration with other developers and creatives
  - Secured attendance records of staffers by introducing an RFID-powered attendance web app built with React, TypeScript, and Supabase, utilizing university IDs for attendance monitoring
- **Fun For Kids Corporation** — Remote
  Full-Stack Developer — *July 2025 - December 2025*
  - Improved efficiency of in-store operations across 13 kiosks by developing a web-based POS system built with Next.js, Tailwind CSS, and Supabase to manage stroller and wheelchair rentals
  - Empowered owners to track overall sales trends and branch performance, identify the most-rented cart types, and monitor employee attendance through an interactive dashboard powered by Chart.js
- **VISON Technologies Corporation** — Malate, Manila
  Research Apprentice — *March 2025 - August 2025*
  - Co-authored and presented a research paper on PyTesseract's performance on handwritten documents during the 2025 Philippine Computer Science Congress
  - Streamlined client video submission for the startup by building a client-facing upload interface using PHP, MySQL, and DigitalOcean Droplets for cloud storage and deployment

- **Google Developer Groups on Campus - DLSU** Malate, Manila
  Developer *November 2024 - January 2025*
  - Extended online presence for La Salle Dance Company - Street by developing its home website with React.js and Tailwind CSS
  - Improved student access to services and information by developing a centralized website for the University Student Government (USG)
- **The LaSallian** Malate, Manila
  Web Development Staffer *October 2024 - August 2026*
  - Promoted informed student voting by helping develop a comprehensive and responsive website for the 2025 General Elections of the DLSU student government using React and Tailwind CSS
  - Drove timely engagement across the org's social media platforms by managing posting schedules and drafting captions for monthly and ad-hoc content

Programming Skills

- **Languages**: Python, Java, C, C++, Assembly (x86, RISC-V), JavaScript, TypeScript
- **Data & Databases**: SQL, PostgreSQL, MySQL, Supabase, Azure Databricks, Google Data Studio, Google Sheets
- **Web Development**: HTML, CSS, PHP, Node.js, Express.js, React, Next.js, Tailwind CSS
- **Development Tools & Platforms**: Git, GitHub, Docker, Bash, Postman, Figma

Education

- **De La Salle University** Malate, Manila
  BS in Computer Science, major in Computer Systems Engineering; CGPA: 3.28/4.0 *Expected December 2026*
  - Thesis: Combining UAV Imagery and Satellite Bathymetry for Topo-bathymetric DEM Generation
  - Relevant Coursework: Statistical Modeling and Simulation, Introduction to Intelligent Systems, Information Management, Tiny Machine Learning and Efficient Deep Learning, Data Structures and Algorithms, Software Engineering, Secure Web Development, Object-Oriented Programming, Innovation and Technology Management, Computer Architecture
- **Mapúa University** Makati, Metro Manila
  Senior High School Diploma; Graduated with High Honors *July 2022*
